

# Pattern Recognition Technologies

- Pattern recognition technologies identify people by physical characteristics
- Technology now essential tool for law enforcement, corporate and national security
- Software platform with sophisticated algorithms will provide
  - Hand & Fingerprint ID: mini-reading device controls access and/or verifies ID
  - Facial Recognition: sketches/photos matched to similar images reduces time needed for police and/or witnesses to identify criminal suspects
  - Speaker Authentication: recognizes individual voice patterns
  - Retina ID: reads retina to establish identity
- Software will be cost effectively created in Russia, and sold exclusively to U.S. partners for marketing and distribution throughout the western world
